# Why Design Thinking in Education?

**Introduction:** The challenges educators encounter in their professional practices are complex, varied and novel that does not have one-size- fit all solutions. Such problems are multifaceted, interdisciplinary, human-centric which do not have linear solutions. Grappling with them requires educators to think creatively about the emerging issues in day-to-day functioning. Most educators are reluctant to intellectual risk taking and open to out-of-the box solutions. An understanding in Design Thinking may provide an accessible structured approach for teachers and teacher educators to think differently in finding solutions for educational problems and practices. Design thinking may provide habits of mind that equips teachers to creatively navigate through and transform the existing conditions

Add a subheading

## **Objectives:**

- 1.To design pedagogy with empathy, insight and understanding.
- 2.To apply a solution based approach to complex problems.
- 3.To develop innovative, creative solutions to problems in pedagogical transaction.
